Please read: Attributes of a sub-account

1. Sub-accounts should be established while logged in under the main account and while on the device associated with that main account
2. Each sub-account user Id should be used to access a unique wireless device
3. If sub-accounts are to be used with the main account device, MAC authentication is not advised
4. Each sub-account Id can only be used by one subscriber at a time. Multiple users of the same sub-account will bump off the account logged in prior if it is still logged in
5. If the main account is MAC authenticated, the sub-accounts are also MAC authenticated for the device that is associated with the sub-account.
6. Sub-accounts must log-in to the device associated with the sub-account Id in order to activate MAC authentication.
